

Category	Label	Value
Bug ID	ID number	B08
	Name	Duplicate contact can be added – system allows adding the same contact more than once
	Reporter	Majd Adnan
	Submit Date	23,July,2025
Bug overview	Summary	System allows adding duplicate contacts
	URL	–
	Screenshot	https://app.screencast.com/MbP1OaLkm6psg https://app.screencast.com/oOc6JAYdNPNx0 https://app.screencast.com/QN23R5t6Pv0np https://app.screencast.com/KDtfGJD1ZbRml
Environment	Platform	HP laptop
	Operating System	Windows 11
	Browser	Chrome
Bug details	Steps to reproduce	1-Open Postman 2-Select the POST method. 3-Enter the following URL: https://thinking-tester-contact-list.herokuapp.com/contacts 4-Go to the Body tab. 5-Select raw and choose JSON from the dropdown. 6- Paste the following JSON as the request body:Request Body{ "firstName": "Majd", "lastName": "Adnan" } 7-Click on the Send button multiple time.
	Expected result	400 Bad Request or 409 Conflict ,No duplicate contact should be created in the system.
	Actual result	API returned: 201 Created Contact was added again (duplicate)
	Description	The system currently allows users to add the same contact multiple times without any validation error. There should be a check to prevent adding duplicate contacts

	Name	Input fields (excluding digit-only fields) accept special characters
	Reporter	Majd Adnan
	Submit Date	23,July,2025
Bug overview	Summary	Input fields accept special characters where they shouldn't
	URL	—
	Screenshot	https://app.screencast.com/8B3g2G5D8wWSi https://app.screencast.com/EJikDWIGR8uBG
Environment	Platform	HP laptop
	Operating System	Windows 11
	Browser	Chrome
Bug details	Steps to reproduce	1-Open Postman 2-Select the POST method. 3-Enter the following URL: https://thinking-tester-contact-list.herokuapp.com/contacts 4-Go to the Body tab. 5-Select raw and choose JSON from the dropdown. 6- Paste the following JSON as the request body:Request Body{ "firstName": "Jo@hn", "lastName": "Do!e", "birthdate": "1970-01-01", "email": "jdoe@fake.com", "phone": "8005555555", "street1": "1 Main%%% St.", "street2": "Apartme%%nt A", "city": "Anyt###own", "stateProvince": "KS##", "postalCode": "12345", "country": "U#SA" } 7-Click on the Send button.
	Expected result	All non-numeric fields (firstName, lastName, email, address, city, etc.) should reject special characters and return 400 Bad Request with appropriate validation messages
	Actual result	Only the email field returned a 400 Bad Request. All other fields (firstName, lastName, address, city) accepted the special characters, and the contact was created.
	Description	The system currently allows users to enter special characters in input fields that are not supposed to accept them (e.g., name, address, city)

Notes	Notes	—

Category	Label	Value
Bug ID	ID number	B10
	Name	API returns full list instead of filtered data when using supported query parameters
	Reporter	Majd Adnan
	Submit Date	23,July,2025
Bug overview	Summary	The API does not apply filtering when valid query parameters are used. It always returns the full dataset, even when a supported parameter and valid value are provided.
	URL	–
	Screenshot	https://app.screencast.com/oP5CseDRSRM05
Environment	Platform	HP laptop
	Operating System	Windows 11
	Browser	Chrome
Bug details	Steps to reproduce	1-Open Postman 2-Select the GET method. 3-Enter the following URL: https://thinking-tester-contact-list.herokuapp.com/contacts?firstName=Majd&lastName=Adnan 4- Click on the Send button.
	Expected result	The API should return only the contacts that match the provided query parameter, with status code 200 OK.
	Actual result	The API returned 200 OK but included the full contact list
	Description	When sending a request to the API with a supported query parameter , the API ignores the filter and returns the complete list of records instead of a filtered result.

Notes	Notes	–

Category	Label	Value
Bug ID	ID number	B11
	Name	API returns full contact list when filtering with a non-existing parameter value
	Reporter	Majd Adnan
	Submit Date	23,July,2025
Bug overview	Summary	The API fails to handle non-existing parameter values correctly and returns the entire contact list instead of an empty result.
	URL	–
	Screenshot	https://app.screencast.com/Yi8x3UY5tZAFO
Environment	Platform	HP laptop
	Operating System	Windows 11
	Browser	Chrome
Bug details	Steps to reproduce	1-Open Postman 2-Select the GET method. 3-Enter the following URL: https://thinking-tester-contact-list.herokuapp.com/contacts?city=123 4- Click on the Send button.
	Expected result	The API should return a status code 200 OK with an empty list []
	Actual result	The API returned 200 OK with the full contact list
	Description	When making a request to fetch contacts using a supported filter parameter with a non-existing or invalid value , the API still returns the full list of contacts instead of returning an empty list or an appropriate response indicating no matches.

Notes	Notes	

Category	Label	Value
Bug ID	ID number	B12
	Name	API returns full contact list when using an unknown query parameter
	Reporter	Majd Adnan
	Submit Date	23,July,2025
Bug overview	Summary	When sending a request with an unknown or unsupported query parameter, the API still returns the full contact list instead of rejecting the request or ignoring the parameter.
	URL	–
	Screenshot	https://app.screencast.com/zNgF45VndbQmG
Environment	Platform	HP laptop
	Operating System	Windows 11
	Browser	Chrome
Bug details	Steps to reproduce	1-Open Postman 2-Select the GET method. 3-Enter the following URL: https://thinking-tester-contact-list.herokuapp.com/contacts?Test=Test 4- Click on the Send button.
	Expected result	The API should either return a 400 Bad Request with an error message, or ignore the invalid parameter and return an empty list or unaffected data
	Actual result	The API returned 200 OK but included the full contact list
	Description	The contact retrieval endpoint does not validate query parameter keys. If a request includes an unknown or unsupported parameter, the API still responds with the full list of contacts instead of returning an error, a warning, or an empty result.
